Experience

Headout | Bengaluru, IN — Nov 2025 — Present

Backend Engineer

- Owned Hub's schedule platform across creation, validation, inventory sync, partner rollout, and production support; schedule APIs handled **256,675 requests** during the review cycle.
- Delivered group pricing across Hub, Absolut, and Uruk and extended Offers with group-size targeting; made **1,495 additional vendors** migratable and moved **7,897 vendor tours** from the legacy Suppliers system to Hub.
- Found a Hub-wide R2DBC transaction bug that partially committed **7 of 8 failed requests**; fixed transaction handling and verified complete rollback.
- Split schedule creation from listing creation across four services and moved inventory repopulation to Temporal with retries, concurrency control, alerts, and recovery tooling.
- Replaced direct Coralogix delivery with OTel-compatible JSON logging across application and infrastructure repositories and wrote the production investigation runbook.

Gameskraft | Bengaluru, IN — Jan 2025 — Nov 2025

Software Engineer

- Designed a **Maker-Checker approval system** in TypeScript with multi-level role-based workflows, escalation rules, audit logs, and automated notifications.
- Refactored 17+ Axios clients into a **centralized factory**, reducing client code by **61%** while standardizing error handling and preserving compatibility.
- Built a gameplay assistant that provided real-time card recommendations, discard guidance, and hand analysis.

Logistics Coordinators | Ontario, CA (Remote) — Apr 2023 — Apr 2024

Project Lead *Aug 2023 — Apr 2024* — Experience Letter

Software Engineer *Apr 2023 — Aug 2023*

- Improved backend **request throughput by 58%** and **average response time by 32%** by re-architecting the backend from a monolithic NodeJS environment to a modular Go solution with PostgreSQL and gRPC.
- **Reduced First Contentful Paint (FCP) by 40%** and **Time to Interactive (TTI) by 29%** by migrating the frontend from a React SPA to Next.js resulting in a faster and responsive user experience.

Projects

Server Side Utilities — Github

- **xmessage:** Delivers asynchronous message handling with **idempotent inbox** and **transactional outbox**, ensuring reliable communication.
- **xlog:** Provides comprehensive logging capabilities to monitor and track application events effectively.
- **Technologies Used — Go, PostgreSQL, RabbitMQ**

Education

2021 - 2025 **National Institute of Technology Delhi** — B. Tech, EEE

Skills

Languages and Databases — Go, Typescript, Rust, C++, Python, Kotlin, Java, PostgreSQL, MongoDB
Web Technologies — ReactJS, NextJS, Drizzle, Express JS, Chakra UI, Tailwind CSS, Tanstack Query
Software Architecture — Hexagonal Architecture, Test Driven Development, Domain Driven Design
